

12 Marsh Lane Wolverhampton, WV10 6QJ

Semi-detached house · Plan generated 12 June 2026 · Ref EPC2C-LLBZ

CURRENT

SAP 58

TARGET BY OCT 2030

SAP 69+

● Achievable

EPC C is reachable for this property, comfortably within the £10,000 cost cap. This plan sets out the most cost-effective route, then up to five ways to get there.

ESTIMATED COST

£3,950–£6,300

PROJECTED RATING

C (69)

PACKAGES

5 · of 14

DISRUPTION

Moderate

WHERE YOU ARE NOW

Your property today

A plain-English read of your current Energy Performance Certificate — what's already working, and what's holding the rating back.

● Walls

Cavity, not yet insulated

An uninsulated cavity is losing heat. Filling it is one of the most cost-effective measures available.

● Roof

~100mm loft insulation

Below the current 270mm standard. Topping up is one of the cheapest efficiency gains available.

● Heating

Mains gas boiler, basic controls

The boiler itself is fine. The controls are dated — modern controls cut waste with no major work.

● Windows

Part single glazed

Remaining single-glazed units let heat escape; replacing them lifts the rating and comfort.

● Renewables

None installed

No on-site generation yet — the single biggest opportunity to lift this rating.

The recommended plan

The most cost-effective combination of measures that takes this property to band C.
Costs are indicative ranges from the EPC register (see note overleaf).

1 Top up loft insulation to 270mm

Bring the loft up to the current standard. A quick job using mineral wool or equivalent, done from inside the loft.

INDICATIVE COST

£100–£350

RATING GAIN

+3 points

DISRUPTION

Low

Warm Homes Plan †

0% finance available

Worth checking: A usable loft hatch (ideally ~600×400mm) and enough headroom to work safely.

2 Upgrade heating controls

A programmer, room thermostat and thermostatic radiator valves — so the system heats only what's needed, when it's needed.

INDICATIVE COST

£350–£450

RATING GAIN

+2 points

DISRUPTION

Minimal

0% finance available

Worth checking: A programmer, room thermostat and thermostatic radiator valves, compatible with the existing boiler/system.

3 Install solar PV (2.5 kWp)

Around six roof panels generating your own electricity. The largest single lift to the rating, and it cuts running costs for the tenant too.

INDICATIVE COST

£3,500–£5,500

RATING GAIN

+6 points

DISRUPTION

Moderate

Warm Homes Plan †

0% finance available

Worth checking: A suitable roof: reasonable orientation (broadly south/east/west, not heavily shaded north), workable pitch, minimal overshadowing.

TOTAL ESTIMATED COST

£3,950 – £6,300

PROJECTED RESULT

C

Ways to reach C

Up to five packages that each reach band C — the recommended plan plus genuinely different trade-offs of cost against disruption.

RECOMMENDED

Loft + Controls + Solar PV

£3,950–£6,300 · C (69) · Moderate

Top up loft insulation to 270mm	£100–£350 · +3
Upgrade heating controls	£350–£450 · +2
Install solar PV (2.5 kWp)	£3,500–£5,500 · +6

Funding: Warm Homes Plan † · 0% finance available

Loft + Cavity + Glazing

£3,600–£6,850 · C (70) · Moderate

Top up loft insulation to 270mm	£100–£350 · +3
Cavity wall insulation	£500–£1,500 · +5
Replace single glazing with double glazing	£3,000–£5,000 · +4

Funding: Warm Homes Plan † · 0% finance available

Controls + Cavity + Glazing

£3,850–£6,950 · C (69) · Moderate

Upgrade heating controls	£350–£450 · +2
Cavity wall insulation	£500–£1,500 · +5
Replace single glazing with double glazing	£3,000–£5,000 · +4

Funding: 0% finance available · Warm Homes Plan †

Cavity + Solar PV

£4,000–£7,000 · C (69) · Moderate

Cavity wall insulation	£500–£1,500 · +5

Funding: Warm Homes Plan † · 0% finance available

Loft + Solar PV + Glazing

£6,600–£10,850 · C (71) · Moderate

Top up loft insulation to 270mm	£100–£350 · +3
Install solar PV (2.5 kWp)	£3,500–£5,500 · +6
Replace single glazing with double glazing	£3,000–£5,000 · +4

Funding: Warm Homes Plan † · 0% finance available

What do I do now?

Four straightforward steps from here.

- 1 **Choose your package** — pick the one that best fits your budget and the disruption you're comfortable with.
- 2 **Get quotes** from local installers before committing — or let GoGreen Alliance arrange accredited installers for you.
- 3 **Keep this plan** — your chosen packages and costs, in one place to share with installers.
- 4 **Mind the deadline** — aim to complete works well before 1 October 2030; the cheapest properties to fix aren't always the quickest.

Ask GoGreen to arrange this for you → info@gogreenalliance.co.uk

Why this matters

1 Oct 2030

All privately rented homes in England & Wales must reach EPC C by this date.

£10,000

The cost cap per property. Spend up to this on improvements; if C still isn't reached, an exemption may apply.

Up to £30,000

The maximum penalty for letting a non-compliant property once the rules are in force.

Already done some of this work?

If you've installed measures since your last EPC, your true rating may already be higher. A fresh EPC (£99) confirms it — and may show you're closer to C, or already there.

Grants & funding. † Warm Homes Plan funding is not yet targeted at the private rented sector, but is expected to extend to it — eligibility will be updated as the scheme develops. The Boiler Upgrade Scheme grant applies to qualifying heat-pump installations. 0% finance availability depends on the provider and your circumstances.

About these figures. Cost estimates are indicative, based on the official EPC register's published figures, and are a guide only. Actual installer quotes may differ and are often higher — always obtain quotes before committing to works. Rating gains are estimates for typical properties of this type, and assume the measures can be installed on your property; a survey confirms feasibility. This report is guidance to help you plan, and is not legal, financial or professional retrofit advice. Compliance requirements and the cost cap reflect Government policy current at the report date and may change.
